

Air2Transport website audit

Audit performed on air2transport.com on 5 August 2026, covering the homepage, navigation, service pages, booking flow entry points, legal pages, metadata, crawler files, layout, content, and links.

Executive summary

The website has several critical issues that should be fixed before further SEO work:

1. Four prominent homepage service links lead to 404 pages.
2. [robots.txt](#) and [sitemap.xml](#) are missing and return the site's 404 page.
3. The homepage intermittently fails with a JavaScript [ChunkLoadError](#).
4. Several lower homepage sections are hidden or covered in the rendered page, even though their text exists in the DOM.
5. Every inspected page uses the same generic title and meta description.
6. No canonical URLs or structured data were found.
7. The Open Graph URL incorrectly references [jet2transport.com](#).
8. "Why Choose Air2Transport" appears twice on the homepage.
9. Footer phone and email details are plain text rather than usable links.
10. Brand/domain details are inconsistent: Air2Transport, Air2 Transport, [air2transport.com](#), [jet2transport.com](#), and the code [JET10](#).

These issues affect crawling, rankings, trust, accessibility, and conversion.

P0 : Critical technical and UX defects

1. Homepage can fail during loading

On the first visit, the homepage displayed:

Application error: a client-side exception has occurred

The browser console showed a [ChunkLoadError](#) for:

[/_next/static/chunks/app/layout-c5e60c9d4220c1e7.js](#)

A reload eventually restored the page, which indicates a deployment/cache mismatch rather than a permanently missing application.

Developer fix:

- Do not purge old chunks until cached HTML can no longer reference them.
- Purge Cloudflare/CDN HTML after each deployment.
- Use immutable caching for hashed assets:
`Cache-Control: public, max-age=31536000, immutable`
- Add client-side recovery for `ChunkLoadError`, allowing one controlled refresh.
- Monitor `_next/static/*` 404 responses after deployments.

2. Homepage content is visually hidden or covered

The full-page rendered view repeatedly showed the header and hero image while later sections were not visible. The affected content exists in the document, including:

- Airport Transfers
- Why Choose Air2Transport
- Get an Instant Quote
- Ready to Book Your Ride
- Footer

This points to a rendering, sticky-layer, viewport-height, background, animation, or capture-state problem. It matches the reported issue that text in these sections is not visible.

Developer fix:

- Inspect the hero's `h-screen`, overflow, sticky/fixed backgrounds, transforms, and stacking contexts.
- Ensure the hero media layer is contained inside the hero:
`position: absolute; inset: 0;`
- Keep the hero wrapper `position: relative; overflow: hidden`.
- Ensure the hero image/video is not `position: fixed`.
- Give subsequent sections an ordinary document flow and predictable stacking:
`position: relative; z-index: 1.`
- Animations must end at `opacity: 1; transform: none`.
- Under `prefers-reduced-motion`, render all copy immediately.
- Test with JavaScript delayed, reduced-motion enabled, and browser back/forward cache.
- Add visual-regression tests at 375, 768, 1280 and 1440px.

3. Broken homepage service links

These prominent homepage cards lead to application 404 pages:

Homepage card

Broken destination

Correct destination

Corporate Travel	/services/corporate-travel/	Create the page or link to the appropriate existing chauffeur/corporate service
Event Transportation	/services/special-events/	/services/events-chauffeur-service/
Wedding Transfers	/services/wedding-chauffeurs/	Create the page or link to /services/events-chauffeur-service/
Hourly & Full-Day Hire	/services/executive-chauffeur/	Create the page or link to /services/chauffeur-services/

These were not isolated crawl-only URLs; they are visible “Learn More” calls to action on the homepage.

Developer fix:

- Update the card configuration so navigation and footer share one canonical service-route source.
- If retired URLs have backlinks or have been indexed, add permanent 301 redirects.
- Add an automated internal-link test that fails the build for any non-2xx internal destination.
- Do not redirect unrelated missing pages to the homepage.

4. Missing crawler files

Both of these routes display the branded 404 page:

- </robots.txt>
- </sitemap.xml>

Developer fix:

Create a valid [robots.txt](/robots.txt), for example:

```
User-agent: *
Allow: /
Disallow: /login/
Disallow: /bookings/new/
```

Sitemap: <https://air2transport.com/sitemap.xml>

Generate an XML sitemap containing only canonical, indexable, successful pages. Exclude login, booking steps, 404 pages and duplicate URLs. Submit it through Google Search Console and Bing Webmaster Tools.

P1: High-impact SEO problems

5. Duplicate titles and descriptions across the site

Every inspected page used:

- Title: Air2Transport - Premium Car Transfer Services
- Description: Professional car transfer services across the UK. Airport transfers, executive chauffeur services, corporate travel, and luxury transport solutions.

This includes the homepage, services, fleet, cities, contact and legal pages.

Developer fix:

Generate unique server-rendered metadata per route.

Recommended examples:

Page	Suggested title
Homepage	Airport Transfers & Chauffeur Services UK Air2Transport
Airport Transfers	UK Airport Transfers with Flight Monitoring Air2Transport
Chauffeur Services	Executive Chauffeur Services Across the UK Air2Transport
Fleet	Private-Hire and Executive Vehicle Fleet Air2Transport
Cities	Private Transfer Services Across UK Cities Air2Transport
Contact	Contact Air2Transport Quotes and 24/7 Support

Homepage description:

Book reliable airport transfers, chauffeur services and long-distance travel across the UK. Fixed pricing, flight monitoring and 24/7 support.

Keep titles near 50–60 characters and descriptions around 140–160 characters, prioritising clarity over exact character limits.

6. No canonical links

No canonical URL was detected on any inspected page.

Developer fix:

- Add a self-referencing canonical to every indexable page.
- Standardise HTTPS, preferred hostname, trailing slashes and lowercase paths.
- Redirect all non-preferred variants to the canonical version.
- Canonicals must use <https://air2transport.com/>, not the old or incorrect brand domain.

7. Incorrect social-sharing URL

The homepage contains:

`og:url = https://jet2transport.com/`

This conflicts with the live air2transport.com domain.

Developer fix:

- Change `og:url` to the canonical page URL.
- Verify all Open Graph and Twitter tags use Air2Transport branding.
- Use a purpose-built 1200×630 social image rather than the small logo.
- Check for other legacy jet2transport.com references in code, environment variables, metadata and analytics.

8. No structured data

No JSON-LD structured data was found.

Developer fix:

Add valid schema based on verifiable business information:

- [LocalBusiness](#) or [TaxiService](#)

- [Organization](#)
- [Service](#)
- [BreadcrumbList](#)
- [FAQPage](#) only where the visible page contains genuine FAQs

Include the canonical URL, name, logo, telephone, email, area served, opening hours and social profiles. Do not add ratings or review markup unless the reviews are genuine and meet Google's requirements.

9. Brand and contact inconsistencies

Observed inconsistencies include:

- Air2Transport
- Air2 Transport
- [air2transport.com](#)
- info@jet2transport.com
- discount code [JET10](#)

These may make the site look like a renamed or copied business and weaken local/entity signals.

Fix:

Choose one public brand spelling—preferably [Air2Transport](#)—and apply it consistently. If the Jet2 email is intentionally retained, explain the relationship; otherwise move to an [air2transport.com](#) address and redirect the old mailbox.

Also verify that the telephone number, WhatsApp number, email and physical operating location are consistent across the website, Google Business Profile and external directories.

Homepage UX and content audit

10. Hero alignment and spacing

The hero copy begins close to the left edge and does not follow the same visible margins and content width as subsequent sections. This makes the hero feel detached from the rest of the design.

Developer fix:

Use a shared site container for the header, hero and all following sections:

```
.site-container {  
  width: min(100% - 2rem, 1200px);  
  margin-inline: auto;  
}
```

Recommended desktop hero structure:

- Hero section should follow same template layout margins and padding laws as

On mobile, use 16–20px side padding and avoid fixed-height heroes that crop the copy.

11. Duplicate “Why Choose Air2Transport”

The heading appears twice:

1. After “Our Services,” with Professional Drivers, Safe & Secure, Trusted Nationwide and Tailored Service.
2. After “Airport Transfers,” with Flight Monitoring, GPS Tracking, 24/7 Support, Meet and Greet, Fixed Rates and Waiting Time.

This creates repetition and weakens the page hierarchy.

Recommended solutions:

- Keep one general “Why Choose Air2Transport?” section after services.
- Move airport-specific benefits into the Airport Transfers block.
- Rename the second heading to **Included with Every Airport Transfer**.
- Alternatively, remove the first section and merge the strongest claims into one eight-item section.

Avoid placing both blocks close together without a clear difference in purpose.

12. Section order needs revision

Recommended homepage order:

1. Hero and primary booking CTA
2. Trust signals: licensed drivers, fixed pricing, flight monitoring, 24/7 support
3. Main services
4. Airport transfers and linked airport destinations
5. Fleet
6. How booking works
7. Genuine customer reviews
8. Instant quote form
9. Cities/service areas
10. Final CTA

11. Footer

The existing city and airport lists are mostly headings without links or enough supporting copy. Either redesign them as useful linked cards or reposition them lower on the page.

13. Airport names and city names are not useful internal links

The listed airports and cities appear as headings rather than navigable destinations.

Suggested fixes:

- Only create pages with genuinely distinct information: pickup procedures, service coverage, typical routes, travel considerations, FAQs and booking CTA.
- Do not publish thin pages that merely swap place names.

14. Footer contact details are not actionable

The footer phone and email are generic text. The top telephone number is correctly linked, but the top email and footer contact details are not.

Developer fix:

```
<a href="tel:+441213141080" aria-label="Call Air2Transport on 0121 314 1080">  
0121 314 1080  
</a>
```

```
<a href="mailto:info@air2transport.com">  
info@air2transport.com  
</a>
```

Use the international format in structured data: **+44 121 314 1080**.

Also link the displayed location to the contact/service-area page instead of implying a precise London office unless the address is genuine.

15. Quote CTAs are misdirected

“Get A Quote” and the final “Get Quote” link lead to the general contact page rather than the instant quote form or booking journey.

Developer fix:

- Link them to the quote form using a stable anchor such as **/#instant-quote**, or to a dedicated quote route.
- Reserve “Contact Us” for general enquiries.
- Keep one CTA vocabulary across the site:

- [Get an Instant Quote](#)
- [Book Your Transfer](#)
- [Call 24/7 Support](#)

16. Quote form requires correction

The homepage form uses a GET action pointing back to the homepage. Its behaviour should be reviewed carefully.

Suggestions for forms:

- Give every input a persistent visible `<label>`.
 - Add `name`, `autocomplete` and correct input types.
 - Use an accessible combined date/time control or separate labelled inputs.
 - Validate errors inline and associate them with fields using `aria-describedby`.
 - Explain whether the displayed result is an estimate or confirmed fare.
 - Preserve entered information if validation fails.
 - Avoid placing addresses into public query-string URLs.
 - Provide a clear success/result state and next action may be add a thank you page after form submission.
-

Copy and language corrections

Current text frequently omits final punctuation, uses inconsistent capitalisation and makes unsupported claims.

Recommended replacements:

Hero

Current:

Your Trusted Partner for Transfer Services

Suggested:

Reliable Airport Transfers and Chauffeur Services Across the UK

Supporting copy:

Travel in comfort with professional drivers, fixed pricing and 24/7 support. Book airport transfers, long-distance journeys and executive travel throughout the UK.

Introductory section

Suggested:

Air2Transport provides dependable private-hire travel for airport transfers, city journeys, corporate accounts and special occasions. Our professional drivers and comfortable vehicles are available around the clock for one-off bookings and ongoing transport requirements.

Airport section

Heading:

Airport Transfers Across the UK

Copy:

Pre-book private transfers to and from major UK airports, with flight monitoring, meet-and-greet options and clear pricing before you travel.

Airport benefits heading

Replace the duplicate heading with:

Included with Every Airport Transfer

Copy improvements:

- Real-time flight monitoring to help coordinate your pickup
- Customer support available 24 hours a day
- Clear pricing with no surge charges

The final statement should specify when the waiting period starts and whether airport parking charges are included.

Discount message

Current:

Get 10% Discount for advance booking - Use code: JET10

Suggested:

Save 10% when you book in advance with code A2T10.

Add the qualifying booking window, expiry date, exclusions and whether the offer applies once per customer. replace **JET10 WITH A2T10**.

Final CTA

Suggested:

Ready to book your journey?

Choose a standard transfer or an executive chauffeur service, with dependable support from booking to arrival.

Buttons:

- **Book Your Transfer**
- **Get an Instant Quote**

Grammar and style corrections

- Use **on time** rather than **On time** inside sentence-style captions.
- Change **Trained, licensed & reliable Drivers** to **Trained, licensed and reliable drivers**.
- Change **Seamless Transfers To & From** to **Seamless transfers to and from**.
- Change **60 Min Waiting Time** to **60 minutes' complimentary waiting time**.
- Change **real-time** consistently; avoid mixing it with **real time**.
- Add full stops to introductory paragraphs.
- Use British English consistently: **traveller**, **personalised**, and **licence** as a noun.
- Replace vague phrases such as “business minds” and “your journey, your way” with concrete benefits.

Trust, accessibility and conversion concerns

- “Thousands of satisfied customers nationwide” requires evidence. CAN WE ARRANGE SOME REVIEW ON GOOGLE BUSINESS PROFILE.
- The displayed customer testimonials should be verified as genuine and ideally linked to a review platform.
- “EXCELLENT” and “Based on reviews from our customers” should state the platform and review count.
- Avoid stock-person names or photographs presented as customers.

- Add operator/licensing information, registered business details and a real service address where appropriate.
 - Confirm colour contrast against every image and overlay.
 - Ensure all functionality works by keyboard.
 - Add a visible focus state to navigation, dropdowns, forms and CTAs.
 - Verify the mobile menu, dropdown dismissal and touch target sizes.
 - Make repeated [Learn More](#) links more descriptive, such as [Explore airport transfers](#).
 - Use decorative empty alt text for purely decorative images; keep descriptive alt text for meaningful images.
 - Reserve image dimensions to reduce layout shift.
 - Optimise large hero and service images and serve responsive formats.
-
